and selecting, without the necessity of depressing
a special function key.

85.   A text input system as in claim 84, wherein said
system comprises:

means for identifying plural lines of text with
the same stem of word in said dictionary which includes said
entered line of text, and determining a unique line of text
which has the same last character as the last entered
character, among said identified plural lines of text,
without being actuated by the depression of a special
function key, at the time of character input;

means for identifying plural lines of text with
the same stem of word in said dictionary which includes said
entered line of text, and determining a unique line of
text which includes the same one as the last entered
characters in the remaining part of line of text in said
dictionary other than that was successfully collated with
said entered line of text, among said identified plural lines
of text, without being actuated by the depression of
a special function key, at the time of character input;

means for replacing said entered line of text with
what was determined by said means for identifying
and determining, without the necessity of depressing
a special function key.

86.   A text input system as in claim 84, wherein said
system comprises:

means for identifying plural lines of text with
the same first part which includes said entered line
of text in said dictionary, and determining a unique line
of text which has the same last character as the last entered
character, among said identified plural lines of text,
without being actuated by the depression of a special
function key;

means for identifying plural lines of text with
the same first part which includes said entered line of text
in said dictionary, and determining a unique line of text

which includes the same one as the last entered characters in the remaining part of line of text in said dictionary other than that was successfully collated with said entered line of text, among said identified plural lines of text, without being actuated by the depression of a special function key, at the time of character input.

87.   A text input system as in claim 84, wherein said system comprises:

means for entering a line of text consisting of a first character followed by some other following characters, character by character;

means for determining a unique line of text in said dictionary which includes said entered line of text, at the time of character input, without a special function key depression;

means for replacing said entered line of text with said unique line of text which was determined by said means for determining, without the necessity of depressing a special function key

88.   A text input system as in claim 84, wherein said system comprises:

means for storing a plurality of lines of text, original words and a unique position count for said line of text in a dictionary;

means for determining a unique line of text in said dictionary which includes said entered line of text, and which has said unique position count same as the number of last collated character position of said line of text in said dictionary collated with said entered line of text, without a special function key depression, at the time of character input;

means for replacing said entered line of text with said unique line of text or said original word which was determined by said means for determining, without the necessity of depressing a special function key.

89.   A text input system as in claim 84, wherein said

system comprises:

  means for storing a plurality of lines of text, in a dictionary.

90. A text input system as in claim 84, wherein said system comprises:

  means for entering a line of text of handwriting strokes, stroke by stroke;

  means for storing a plurality of lines of text of handwriting strokes and original words and a unique position count for said line of text of handwriting strokes, in a dictionary;

  means for determining a unique line of text of handwriting strokes in said dictionary which includes said entered line of text of handwriting strokes and which has said unique position count same as the number of last collated stroke position of said line of text of handwriting strokes in said dictionary collated with said entered line of text of handwriting strokes, at the time of entering the handwriting stroke, without a special function key depression;

  means for replacing said entered line of text of handwriting strokes with said unique line of text of handwriting strokes or said original word which was determined by said means for determining, without the necessity of depressing a special function key.

91. A text input system as in claim 90, wherein said system comprises:

  means for identifying plural lines of text of handwriting strokes with the same first part which includes said entered line of text of handwriting strokes in said dictionary, and determining a unique line of text of handwriting strokes which has the same one as the last entered stroke, among said identified plural lines of text of handwriting strokes, without being actuated by the depression of a special function key, at the time of entering strokes;

  means for identifying plural lines of text of

handwriting strokes with the same first part which includes said entered line of text of handwriting strokes in said dictionary, and determining said unique line of text of handwriting strokes which includes the same last one as the last entered strokes in the remaining part of line of text of handwriting strokes in said dictionary other than that was successfully collated with said entered line of text of handwriting strokes in said dictionary, among said identified plural lines of text of handwriting strokes, without being actuated by the depression of a special function key, at the time of entering stroke.

92. A text input system as in claim 90, wherein said system comprises:

means for entering a line of text of handwriting strokes consisting of a first stroke and some other following strokes, stroke by stroke;

means for determining a unique line of text of handwriting strokes in said dictionary which contains said entered first stroke and some other following strokes, at the time of entering the strokes, without a special function key depression;

means for replacing said entered line of text of handwriting strokes with said unique line of text of handwriting strokes which was determined by said means for determining, without the necessity of depressing a special function key.

93. A text input system as in claim 84, wherein said means for determining said unique line of text comprises determining a predetermined number of lines of text, in said dictionary.

94. A text input method comprising the steps of:

entering a line of text, character by character;

storing a plurality of lines of text, and relevant words for said line of text, in a dictionary;

determining a unique line of text stored with plural number of said relevant words in said dictionary, and

selecting a unique word among said relevant words which includes said entered line of text in the remaining part of line of text in said dictionary other than that was already collated with said entered line of text, at the time of character input, without a special function key depression;

replacing said entered line of text with said unique line of text or said unique word which was determined and selected by said determining and selecting steps, without the necessity of depressing a special function key.

95.   A text input method as in claim 94, wherein said method comprises the steps of:

identifying plural lines of text with the same stem of word which includes said entered line of text in said dictionary, and determining a unique line of text which has the same last character as the last entered character, among said identified plural lines of text, at the time of entering character, without being actuated by the depression of a special function key;

identifying plural lines of text with the same stem of word which includes said entered line of text in said dictionary, and determining a unique line of text which has the same one as the last entered characters in the remaining part of line of text in said dictionary other than that was successfully collated with said entered line of text, among said identified plural lines of text, at the time of entering characters, without being actuated by the depression of a special function key;

replacing said entered line of text with what was determined by said identifying and determining steps, without the necessity of depressing a special function key.

96.   A text input method as in claim 94, wherein said method comprises the steps of:

identifying plural lines of text with the same first part which includes said entered line of text in said dictionary, and determining a unique line of text which has the same last character as the last entered character,

among said identified plural lines of text, without being
actuated by the depression of a special function key
at the time of entering characters;
     identifying plural lines of text with the same
first part which includes said entered line of text in said
dictionary, and determining a unique line of text which
includes the same one as the last entered characters in the
remaining part of line of text in said dictionary other
than that was successfully collated with said entered line of
text, among said identified plural lines of text, without
being actuated by the depression of a special function key,
at the time of character input.
97.   A text input method as in claim 94, wherein said
method comprises the steps of:
     entering a line of text consisting of a first
character followed by some other following characters,
character by character;
     determining a unique line of text in said dictionary
which contains said entered first character and some other
following characters of line of text, at the time of character
input, without a special key depression;
     replacing said entered line of text with said unique
line of text which was determined by said determining step,
without the necessity of depressing a special function key.
98.   A text input method as in claim 94, wherein said
method comprises the steps of:
     storing a plurality of lines of text, original
words and a unique position count for said line of text,
in a dictionary;
     determining a unique line of text in said dictionary
which includes said entered line of text and which has
said unique position count same as the number of last
collated character position of said line of text in said
dictionary collated with said entered line of text, without
a special key depression, at the time of character input;
     replacing said entered line of text with said unique

line of text or said original word which was determined
by said determining step, without the necessity of depressing
a special function key.

99. A text input method as in claim 94, wherein said
method comprises the step of:

storing a plurality of lines of text, in a dictionary.

100. A text input method as in claim 94, wherein said
method comprises the steps of:

entering a line of text of handwriting strokes, stroke
by stroke;

storing a plurality of lines of text of handwriting
strokes, original words and a unique position count for said line
of text of handwriting strokes, in a dictionary;

determining a unique line of text of handwriting
strokes in said dictionary which includes said entered
line of text of handwriting strokes and which has said unique
position count same as the number of last collated
stroke position of said line of text of handwriting strokes in said
dictionary collated with said entered line of text of
handwriting strokes, at the time of entering the handwriting
stroke, without a special key depression;

replacing said entered line of text of handwriting
strokes with said unique line of text of handwriting strokes
or said original word determined by said determining step,
without the necessity of depressing a special function key.

101. A text input method as in claim 100, wherein said
method comprises the steps of:

identifying plural lines of text of handwriting strokes
with the same first part which includes said entered line of text
of handwriting strokes, and determining a unique line of text of
handwriting strokes which has the same last stroke
as the last entered stroke, among said identified
plural lines of text of handwriting strokes, without
being actuated by the depression of a special function
key, at the time of entering strokes;

identifying plural lines of text of handwriting

strokes with the same first part which includes said
entered line of text of handwriting strokes, and
determining a unique line of text of handwriting strokes
which includes the same one as the last entered strokes
in the remaining part other than that was successfully
collated with said entered line of text of handwriting
strokes, among said identified plural lines of text of
handwriting strokes, without being actuated by the depression
of a special function key, at the time of entering the
handwriting stroke.

102.   A text input method as in claim 100, wherein said
method comprises the steps of:

    entering a line of text of handwriting strokes
consisting of a first stroke and some other following
handwriting strokes, stroke by stroke;

    determining a unique line of text of handwriting strokes
in said dictionary which contains said entered first
stroke and some other following strokes, at the time of
entering handwriting stroke, without a special key
depression;

    replacing said entered line of text of handwriting
strokes with said unique line of text of handwriting strokes
which was determined by said determining step, without the
necessity of depressing a special function key.

103.   A text input method as in claim 94, wherein
said determining step comprises determining a predetermined
number of lines of text in said dictionary.

REMARKS:

    Applicant noted what are mentioned in the paragraphs 4 and 5 of the
Office action.

    In paragraphs 6 and 7 of the Office action, it is stated that claims
63-83 are rejected under 35 U.S.C. 112, second paragraph, as being
indefinite for failing to particularly point out and distinctly claim the
subject matter which applicant regards as the invention, and as being
